

Patient Communication

New slate PC technology has made it possible to enable patients to more effectively communicate with healthcare personnel in hospitals and other healthcare facilities at a lower entry cost and with more versatile, multi-function products.

Take advantage of MCA systems such as the C5™ from Motion Computing or the MediSlate™ from TabletKiosk that can handle your EMR requirements and allow doctors, nurses and other personnel to communicate with alert but non-verbal patients.

Packaged with the Patient Communication Pages, these MCA's allow patients to speak with questions, comments and needs to healthcare professionals and family. Unlike expensive dedicated AAC devices, these tools can be disinfected with sprays or wipes without damage to the displays or internal parts because there are no exposed ports. Case material is designed to be cleansed from bacteria to avoid disease transfer from patient to patient or staff to staff.

C5 MCA

MediSlate

Patients can:

- Ask questions of healthcare professionals
- Speak to family
- Request information or ask for assistance
- Create speaking messages
